

Services ..

Our firm was established in 1980 as a Consulting Engineering practice to service the building and development industries.

From the time of its inception, the company has been involved in many and varied projects and provides the following services:

- Environmental planning and site evaluation
- Structural design in concrete, steel, earth and rock
- Rezoning and land use planning
- Civil design of subdivision roadworks, dams and bridges
- Building inspections and reports
- Geotechnical soil investigations and environmental impact studies
- Flood studies and stormwater drainage design
- Project management and building design
- Water and sewer reticulation design

The permanent staff of our firm consists of the Principal Engineer, Graduate Engineer and Technical Assistant. Each of us has adopted a very progressive outlook, endeavouring to identify and incorporate environmental considerations into our design philosophy. We are competent to handle the above projects with the Principal being a registered professional engineer in Australia and specifically Queensland together with having qualifications in Civil Engineering, a Masters Degree in Building Science and selected topics in Environmental Management.

Our firm is of a size that can ensure personalized attention and service to our clients. Our office is computer oriented encompassing design and drafting in addition to general office management, and we can adequately handle projects with values up to \$3M. We are dedicated to handling these projects in the prompt and professional manner that our clients rightly expect.
